

Assignment 1 – Explore n8n Case Studies

Go through the n8n case studies and understand how real enterprise organizations are using n8n.

Focus on:

- What problem/use case they had
- Where and why they implemented n8n
- How the workflow was implemented
- How n8n helped them in real-world scenarios

<https://n8n.io/case-studies/>

Implementation

Just taken an example of Trendyol

- What problem/use case they had

Trendyol had a large technology organization with **~2,000 people across ~200 teams**, but the main challenge was **engineering dependency and limited development bandwidth**.

Key problems:

- Small automation ideas had to wait for **engineering resources and product-roadmap prioritization**.
- Technical teams spent time building repetitive utilities such as:
 - Sending a Slack notification when a system event occurs.
 - Generating daily business/data summaries.
 - Creating small internal utility applications.
- Non-technical teams had ideas for automation but **couldn't implement them independently**.
- The company wanted teams to **experiment with ideas quickly instead of waiting for development cycles**.

Implemented as below

- Logging
- SSO

- Secure Credential Management
- Project level access Isolation

How the workflow was implemented

Simple Architecture:

Business / Technical User ↓ n8n Workflow ↓  ↓ ↓ ↓ API SQL AI/LLM
 ↓ ↓ ↓ Systems Data Knowledge Base ↓ Business Logic ↓ Action / Decision ↓ Slack /
 Ticket / Chatbot / System

Complex Architecture:

Requesting Team ↓ Central Workflow Team ↓ Build / Support Workflow ↓ Deploy to n8n
 ↓ Requesting Team Owns & Maintains It

How n8n helped them in real-world scenarios

Seller Chatbot

Problem: Sellers needed information and analytics from Trendyol's seller platform.

Instead of simply returning an AI-generated answer, the chatbot could **execute actions through n8n**.

Search Relevancy Agent

Legal ChatBot

Overall impact

The biggest benefit wasn't just individual workflows. It was the ability to make **automation available to both technical and non-technical employees**.

Area	Before n8n	With n8n
Small automation	Required developer effort	Teams can build themselves
Engineering dependency	High	Reduced
Roadmap dependency	Often required	Can experiment immediately
Slack/system notifications	Custom development	n8n workflow

Area	Before n8n	With n8n
AI use cases	Required engineering involvement	Teams can prototype/build
Internal knowledge access	Manual interaction	AI + RAG workflow
Search monitoring	Manual/reactive	Automated/proactive
Workflow ownership	Centralized	Decentralized
Security	—	Project isolation, scoped credentials, logging

Assignment 2 – Explore & Build an n8n Template

Open the Templates section in n8n and explore the available workflow templates (12,000+).

- Explore different workflows and understand what they are doing.
- Choose any one template/use case of your interest.
- Understand the complete workflow, nodes, integrations, and flow.
- Try to build/recreate the workflow yourself in n8n.

The objective is not just to copy the template, but to understand why each node is used and how the complete workflow solves a real-world problem.

Trying to test the node with
