Home Assignment:

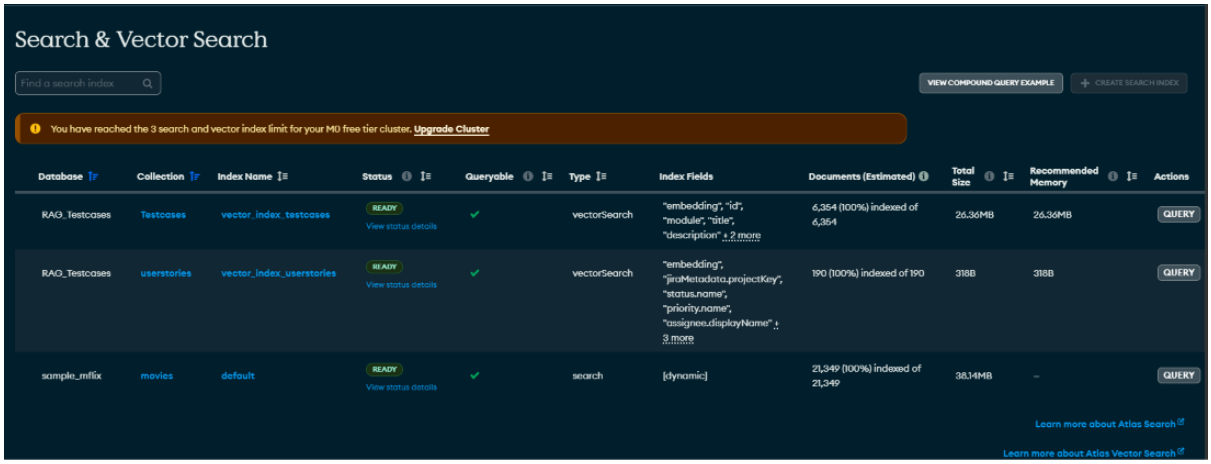

Implement the user story ingestion process by following the same approach used for test cases. Read the user story Excel file from the "src/data" folder, ingest the data into MongoDB, and create the user story vector index using the "user- stories-vector-index.json" configuration file available in the "src/config" folder.

Implementation Steps

1. Created separate collection for User stories

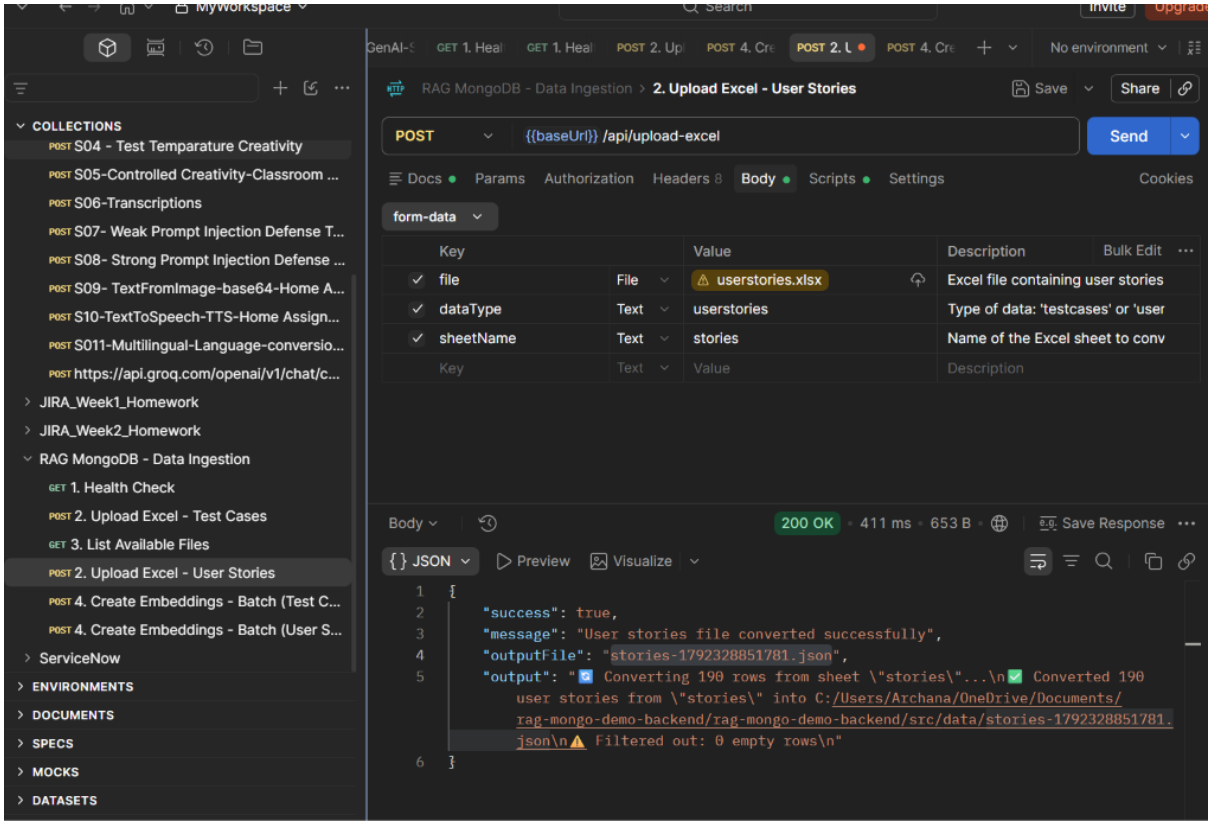

2. Created a Vector index for User story and copy pasted the json path from src/config/user-stories-vector-index.json

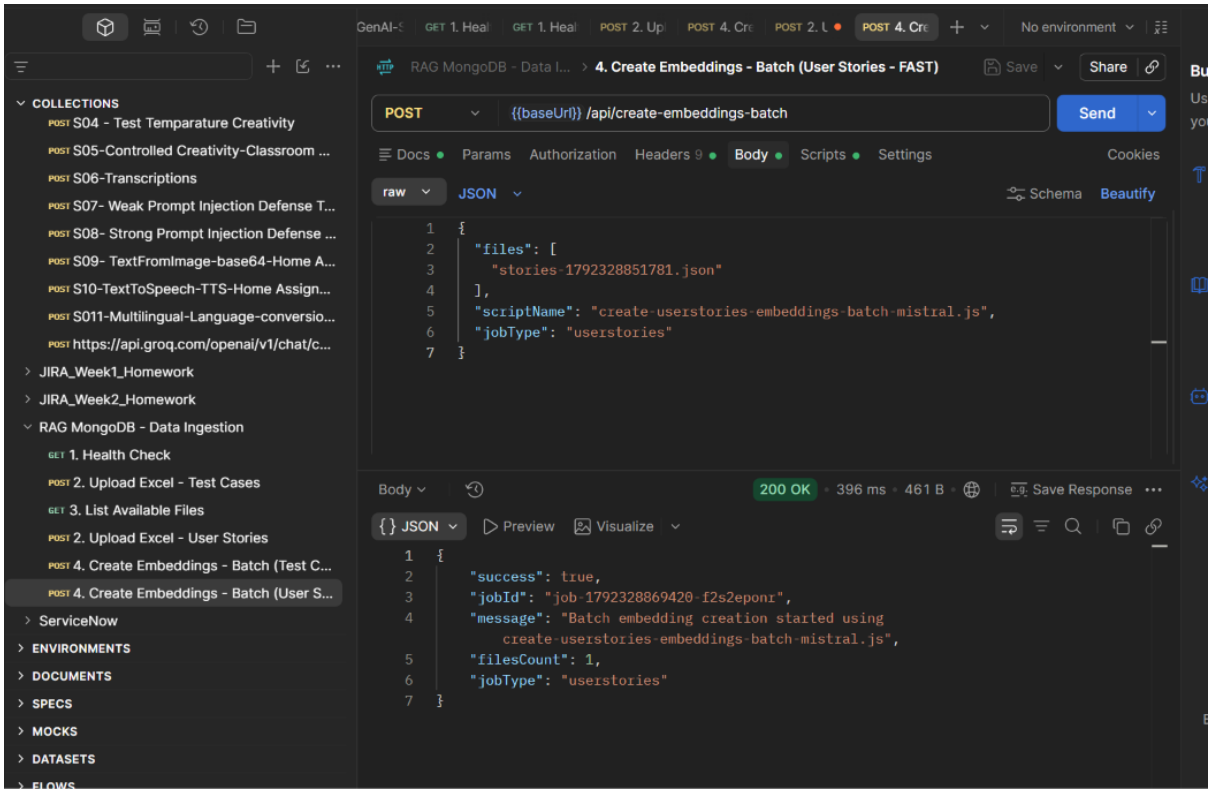

Updated the new collection and index details in .env file

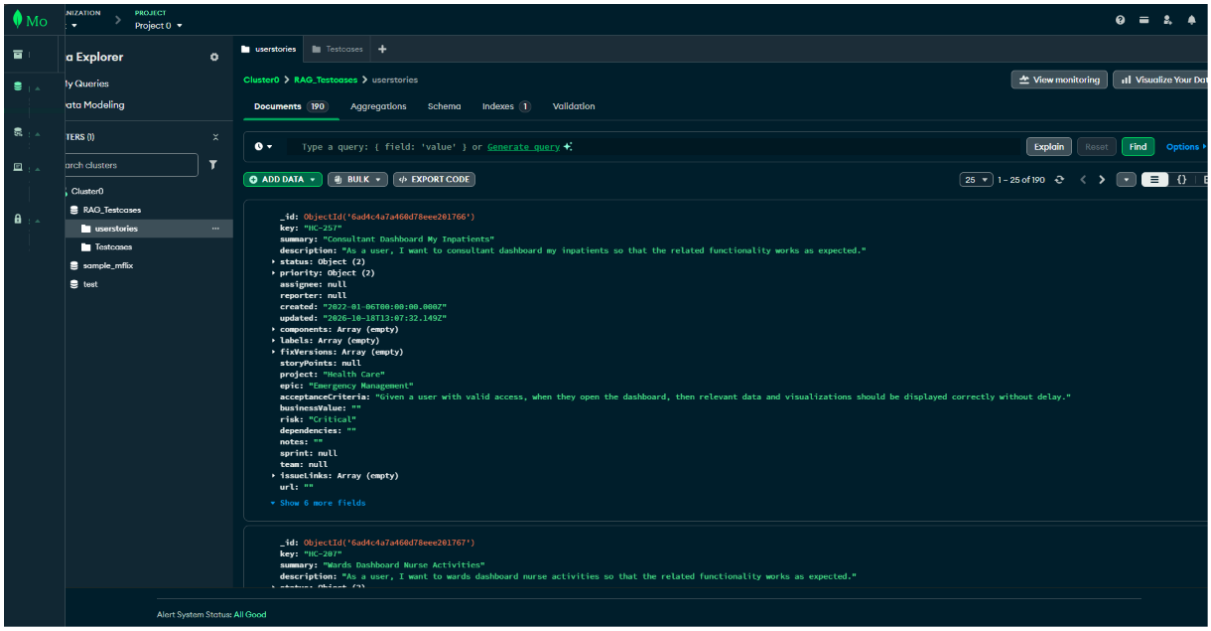

Used Postman collection to ingest the data for User story

From output file of json should be copy pasted the next batch processing file

Then successfully all the user stories in the excel got ingested in to the Vector DB
